Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

patentdocket@oblon.com
oblonpat@oblon.com
jgardner@oblon.com

Office Action Summary	Application No.	Applicant(s)	
	10/089,056	LANGE ET AL.	
	Examiner	Art Unit	
	Cephia D. Toomer	1797	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 09 June 2009.
 2a) This action is FINAL. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 93-110 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) Claim(s) _____ is/are allowed.
 6) Claim(s) 93-96 and 99-110 is/are rejected.
 7) Claim(s) 97 and 98 is/are objected to.
 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 9, 2009 has been entered.
2. This Office action is in response to the amendment filed June 9, 2009 in which claims 80, 82, 88 and 89 were canceled; claims 93-95 were amended ; and claims 109-110 were added.
3. The rejection of the claims under 35 USC 103(a) over Malfer, Cherpeck and Baxter is withdrawn in view of the amendment to the claims.

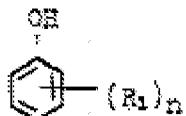

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
5. Claims 93-96 and 99-110 are rejected under 35 U.S.C. 103(a) as being unpatentable over Worrel (US 3,948,619) in view of Cherpeck (US 5,300,701) and Baxter (US 6,562,913).

Art Unit: 1797

Worrel teaches fuel composition comprising gasoline and detergent amount of the condensation product of an alkylphenol of the formula

wherein n is an integer from 1 to 2 and R_1 is an aliphatic hydrocarbon radical having a molecular weight of from about 400 to 1500, from 1-5 mole parts of an aldehyde and 0.5-5 moles of an amine having at least one HN<group (see abstract; col. 1, lines 35-63).

The preferred aliphatic hydrocarbon radical of the phenol is a polybutene (see col. 5, lines 24-36). This teaching suggests polyisobutyl radicals. The aldehyde may be formaldehyde and the amine may be dialkylamines such as dimethylamine or diethylamine (see col. 5, lines 37-47, 59-64). The alkylation of the phenol is carried out in the presence of an alkylation catalyst (see Example 1). The condensation products may be prepared as a concentrate wherein the detergent is present in an amount from 0.1-90 wt % (see col. 22, lines 34-40). The fuel composition may contain other conventional additives (see col. 23, lines 5-26). Worrel also teaches that these condensation products are known lubricant additives (see col. 1, lines 23-32). Worrel teaches the limitations of the claims other than the differences that are discussed below.

In the first aspect, Worrel differs from the claims in that he does not specifically teach that the alkyl group is a highly reactive PIB having a polydispersity of less than 3.0. However, Cherpeck and Baxter teach these differences.

Cherpeck teaches a process for the preparation of a PIB substituted phenolic compound wherein the phenolic compound is alkylated in the presence of an acid catalyst (see abstract). The PIB has a number average molecular weight of 300-5000 and contains at least about 70% methylvinylidene (highly reactive) (see col. 2, lines 37-49). Cherpeck teaches that these PIB compounds are the commercial product ULTRAVIS-10 (molecular weight 950) (see Example 1).

Baxter teaches that highly reactive PIB such as ULTRAVIS possess a polydispersity of no more than 2.0 (see col. 4, lines 12-29, 54-58).

It would have been obvious to one of ordinary skill in the art to have replaced the polybutene of Worrel with a highly reactive polybutene possessing a polydispersity of less than 3.0 because Cherpeck teaches that employing such a polybutene provides the desired PIB-phenol in significantly higher yield than employing conventional PIB having minor amounts of methylvinylidene and the phenols exhibit minimal molecular weight degradation (see col. 4, lines 19-57).

In the second aspect, Worrel differs from the claims in that he does not specifically teach the adduct mixture of claims 95, 96 and 99-102. However, no unobviousness is seen in this difference because Worrel, Cherpeck and Baxter teach a PIB-substituted phenol that appears to meet the claimed limitations and they teach the same amine and aldehyde reactants. Worrel reacts the components in the same manner as Applicant. Therefore, it would be reasonable to expect that the adducts of

the present claims would be within the scope of Worrel in view of Cherpeck and Baxter, absent evidence to the contrary.

6. Claims 97 and 98 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art fails to teach or suggest fractionating the reaction mixture.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cephia D. Toomer whose telephone number is 571-272-1126. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on 571-272-1444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see <http://pair-direct.uspto.gov>.

Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
